ANHUMAS

Brazil • Mogiana

ABOUT THIS COFFEE

The town of Campestre is located in the volcanic region of southern Minas Gerais. The soil in this region is the legacy of an extinct volcano, which, combined with the climate and topographical features, forms an exceptional terroir. The climate features an average annual temperature between 17 and 20 °C and average rainfall of 1700 mm. Coffee production in the region is situated between 800 and 1300 meters above sea level and is shaped by a mountainous landscape.

Species	**Arabica**
Varieties	**Red catuai**
Process	**Pulped Natural**
Altitude	**1000 - 1300**
Harvest	**May**
Type of harvest	**Mechanical**

In the past, the region's primary agricultural activity was dairy farming. However, with the expansion of coffee cultivation across the mountains, the region began to adopt coffee growing as a complementary activity, and today, it has become the main agricultural activity.

As in most Arabica coffee producing regions in Brazil, the Catuai variety is predominant. However, specialty coffee producers are investing in new varieties, such as Arara or Catucai 2SL.
